NAME INDEX

Abbott, A., 166
Agresti, A., 42, 84
Akritas, M., 31
Allison, P., 23, 24
Amato, P., 43
Amemiya, T., 27, 28
Amemiya, Y., 137
Amenta, E., 165
Andersen, E. B., 40, 41n1, 42, 61
Anderson, R., 14
Anderson, T. W., 137
Andrich, D., 45–6n5
Arminger, G., 1, 21
Avison, W. R., 72n13

Barron, D. N., 114, 116
Bartholomew, D. J., 135
Bates, G. E., 121
Beck, E. M., 114, 117, 118
Becker, M. P., 1, 14, 17, 18, 31, 32, 84n6, 88
Benus, J., 44
Berk, K. N., 187
Berk, R. A., 167
Berkman, L., 156
Bernardo, J. M., 123
Birch, M. W., 15
Bishop, Y. V. V., 91
Blau, P. M., 193–7, 199–202, 200n6, 202n10, 204n14, 219, 221–3
Bollen, K. A., 94, 137n1
Bonacich, P., 200
Booth, A., 43
Boswell, T., 167
Brasure, M., 123, 124
Breslow, N. E., 117
Brown, G. E., 43
Burt, R. S., 200

Cameron, A. C., 114, 116
Cameron, D., *178*
Campbell, M. J., 118
Casper, L., 32
Charpentier, P., 133, 153
Chase, I. D., 223
Cheng, T., 21, 24, 32
Christoffersson, A., 138
Clayton, D., 115
Cleary, P. D., 43
Clive, J., 134, 153
Clogg, C. C., 1–33, 40–2, 41n2, 61, 79, 80, 82–90, 84n6, 86n8, 88, 88n10, 98, 102
Clogg, Edith, 3
Clogg, Edna, 3
Clogg, J. E., 3
Clogg, K., 3
Clogg, R., 3
Coleman, J. S., 40, 194n1, 197, 197n3, 199, 223
Conaway, M. R., 42, 45–6n5
Cook, Karen S., 194, 196, 221, 222
Corder, L. S., 135, 140, 141
Cox, D. R., 115
Cressie, N., 42
Crockett, L., 79
Croon, M. A., 86n8

D'Arcangues, C., 118
de Leeuw, J., 40, 41n2, 83n2

SUBJECT INDEX

advice networks, 194–5, 197, 201, 205, 213–14
alternative compensation, 221
American Journal of Sociology, 31
American Sociological Association, 31, 32, 165
American Statistical Association, 31, 32
ANAOS software, 14
association models, 15, 79, 84
  and abortion, 98–108
  and latent variables, 80
asymptotic theory, 21, 24–31, 137n1, 147
autoregression models, 26–7

balance theory, 222
Bayesian approach, 11
  and model uncertainty, 166–7, 170–2, 174, 177, 186–7, 188
Bayesian Information Criterion (BIC) statistics, 63, 64, 66, 98, *99*, 100, 102–3, *103*, *105*
  and vague theory, 175
Bernoulli random variables, 11
BIC. *See* Bayesian Information Criterion
Bonferroni's inequality, 30
bootstrap estimation, 63, 70, *71*, 187–8

canonical links, 23, 29
categorical data analysis, 2, 14–22, 80, 84n6
Categorical Data Analysis System (CDAS) software, 14, 15
categorical latent class and structure analysis, 135
Census and Population Subcommittee, 32
Census Bureau, 2, 9, 10, 32
chi-squares, 63, 98, *99*, 100, 102–3, *103*, *105*
cluster analysis models, 134, 135
clustered count data, 113, 117–19
cluster-specific random effects, 115
CML estimation. *See* conditional maximum likelihood
collinearity, 169–79
Columbia University, 165
column-effects latent association model, 93, *94*, *103*
Commission on Professional Hospital Activities, 124
compliance and advice, 196–7, 200
conditional association models, 16, 79, 88
conditional independence, 140
conditional latent association model, 90–2
conditional latent class probabilities, *81*, 97, 107
conditional likelihood estimation, 20, 39, 103
conditional maximum likelihood (CML) estimation, 61–2
conditional probabilities, 55, 81, *81*

conditionally time-homogenous processes, 42–3
contingency tables, 14, 22
continuous indicator variables, 138
control variables, 167
covariance estimation, 30
covariance matrix, 23, 136, 140, 141, 176, 184
covariance structure models, 28
covariate analysis, 8–9
critical-*N*, *149nc*

data mining, 169, 172
data size, 169, 170, 187
Davidon-Fletcher-Powell (DFP) algorithm, 122
decommodification, 177–9
degrees of freedom, *94*, 155, 172, 176
demographics, 7–8, 9–14
Demography, 31
depression mobility, 43n4
dichotomous indicator variables, 87n9, 87–8, 90, 100, 138, 156
direct standardization
  and census data, 12, 13
discriminant analysis, 135
dual labor market theories, 8
Duncan model, 49, 63–70, *65*, *67*, *68*
duration effect, 40
dyads, *218*, 219

Educational Testing Service, 31
error components models, 27
E-state structuralism, 223
event-history analysis, 115
exchange network structures, 195, 202, 208, 211, 212–19, 222
exchange theory, 194, 196, 197n3, 200, 222–3
expectation states theory, 194, 222
external variable model, 90

factor analysis, 82, 133–62
factor analytic model, 136–8, 141–2
  versus grade of membership models, 142–61
feasible GLS, 26
federal bureau model, 194–5, 199–200, 200n6, 219
finite mixture models, 119–20
Fisher information, 176
fixed effect models
  versus random effect models, 40–1
fixed effect Rasch models, 42
fixed effects models, 120
FORTRAN software, 64, 129–30n2
Fulbright program, 79

game theory, 193, 195, 202n9, 203–12, 213, 222
gamma-distributed cluster-specific effects, 115, 116, 119
GED. *See* General Educational Development (GED) scores
General Educational Development (GED) scores, 7
General Social Survey (1982), 20
general theorizing, 189
generalized linear models, 23, 27
generic theoretical method, 194, 196, 221–3
GoM. *See* grade of membership models
Goodman's model, 19
goodness of fit, 63
  and contingency tables, 21
  and factor analytic model, 147, *149nb*
  and grade of membership models, 141
  and model uncertainty, 169, 181
  and unemployment, 5
Government Accounting Office, 32
GQOPT software, 129
grade of membership models, 133–6, 138–62
  analysis and, 153–61
  versus factor analytic model, 142–61
grouping variables, 87, 102, 107
Guttman scalable patterns, 16

heterogenous linear-by-linear interaction latent association measurement model, 89–90
heterogenous linear-by-linear model, 100
heterogenous uniform association models, 16
heterogenous unrestricted T-class simultaneous latent class model, 84
heteroscedasticity, 26, 183

histograms, *182*
homogenous linear-by-linear interaction model, 88–9, 100, *101*, 102
Hoover Institution, 193

index of dissimilarity, 21
indicator analysis, 136
indicator variables
  in grade of membership models, 139
  in latent association model, 80–1, 102
Internal Revenue Service, 32
Inter-University Consortium for Political and Social Research, 31, 124n1
interval scoring, 84n7
item scale analysis models, 80

jacknife estimators, 13–14
joint conditional probabilities, 55
joint distributions, 24–5, 160
Journal of Education and Behavioral Statistics, 31
Journal of the American Statistical Association, 31

knowledge, 167, 200
Kuhn-Tucker constraints, 153

labor force measurement, 3–9
labor utilization rate, 3
labor utilization typology, 8–9
Laplace approximations, 175
latent association measurement models, 84–6, 87, 88–90
latent association models, 85, 90–4, *94*, 96, 102, *103*
latent class analysis, 14, 18, 80, 82, 96, 107
latent class Markov chain models, 41n2
latent class models, 2, 79, 84–5, 134, 135
  heterogenous unrestricted T-class simultaneous, 84
